

CLEANER, HEALTHIER BBQ COOKING!

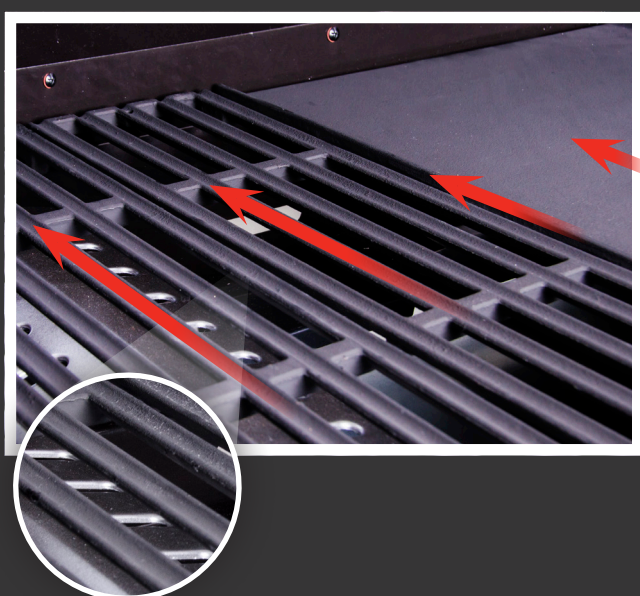

Introducing the NEW Masport Fat Away Drainage System!

The Fat Away Drainage system, allows for cleaner healthier barbecuing as it drains excess fat and oils away from your foods. It also gives you the added versatility of additional plate configuration with the three piece grill set and kebab racks.

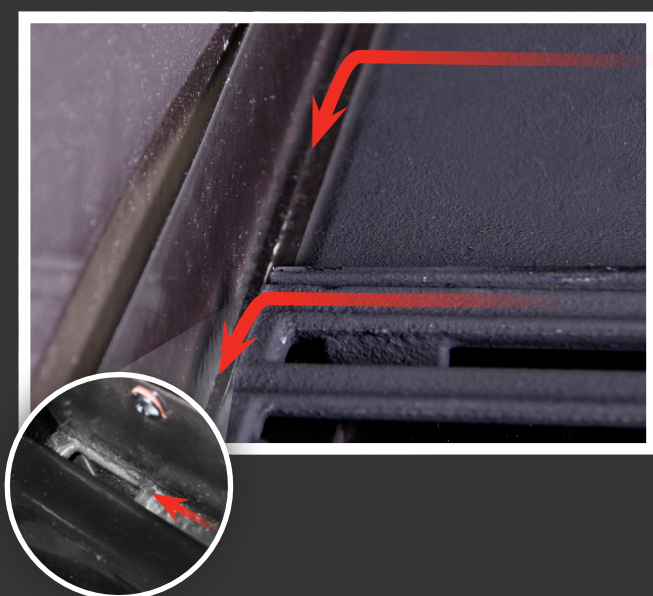

This allows you to cook your way!

HOW IT WORKS

As you barbecue, fat and excess oils are directed away from your food, via the angled grooved grills and angled hot plate.

The fat and excess oils are directed off the cooking surfaces and into the draining channel at the rear of the barbecue. The excess fats and oils travel down the channel through a drainage chute.

The fat and excess oils are then directed cleanly into the drip tray where they will be collected into the slide out collection cup, for easy and safe disposal.

Your local Territory Manager is out there talking about this new feature now. For further information contact them at: 1300 366 225 (AU) or 0800 MASPORT (NZ).
